

DECEMBER 2018 UPDATE

We provide composite returns for Growth, Growth & Income (a combination of “Growth & Income” and “Moderate Balanced” accounts), Conservative Balanced, Retirement Income (a combination of “Retirement Income” and “High Monthly Payout” accounts), Closed-End Income and ETF Options Income. We present net-of-fee results in the following table. (SSB composites are in boldface.) For the sake of comparison, we also include returns for various indexes and blended benchmarks that we believe are commensurate in risk to our strategies, as well as passively managed funds-of-funds from Vanguard.

Salzinger Sheaff Brock	YTD 2018	1 Yr	Three Yrs	Five Yrs
Growth	0.6%	1.6%	8.8%	7.5%
<i>Benchmark (90% Lipper Multi-cap Core/10% Lipper General Bond Fund)</i>	-3.5%	-2.2%	7.4%	5.5%

Through November 31, 2018. PLEASE SEE IMPORTANT DISCLAIMER ON BACK. Note: *Results are from an actual, representative account established and maintained by the portfolio manager with his own money, managed with his own tax situation in mind. Other accounts in this style might have had different results; &&A benchmark for the entire U.S. stock market, ##Small-cap stocks. @@ Foreign stocks, including developed foreign countries and emerging markets. Style Comparisons: &A good comparison for SSB Growth and SSB Growth & Income. #A slightly lower risk comparison for SSB Growth & Income. @A good comparison for Salzinger Sheaff Brock, LLC (SSB) Conservative Balanced. ^A good comparison for SSB Retirement Income. Composites include all fully discretionary, management fee-paying including those accounts no longer with the firm of reasonable size that are substantially invested in accordance with the composite strategy or style. Returns are presented net of maximum management fees and all trading expenses, and the reinvestment of all income. Net-of-fee performance was calculated using maximum management fees. Actual advisory fees and transaction fees will vary depending on, among other things, the portfolio, account size, and activity. Fees are described in SSB's ADV Part 2A. The securities mentioned in this report can be, and often are, owned by clients and employees of SSB. Past performance is not indicative or a guarantee of future results (continued on back).

We all know it has been a very tough market since early October. Though broad measures of the U.S. stock market are down in the low double digits since then, many stocks and even sectors are down much more from their highs. This has meant that the market as well as most mutual funds and ETFs are down substantially for the year.

Pessimism about the stock market is extreme. The latest survey by the American Association of Individual Investors has almost half of respondents bearish, which is the most pessimistic reading in this survey in more than five years. Only about 21% of survey respondents were bullish. Outflows from equity mutual funds have been very strong, supposedly \$46 billion in a recent week (in early/mid-December), the most ever.

Pessimism about the economy is also growing. While individual consumers remain confident generally, the latest Consumer Sentiment survey by the University of Michigan showed increasing fear about potential job losses, or, at least, more respondents saying they had heard job prospects would be worsening. But the media, as well as some economic and market experts, are expressing some gloomy viewpoints looking out to next year.

They point to a determination by the Federal Reserve Board to increase interest rates under its control and decrease liquidity generally; slowing economic activity overseas; the big political fights in

Washington, with seemingly endless, multifaceted investigations of the Trump administration; and the “Cold War” with China, especially as it relates to tariffs and trade.

I think investors as well as sentiment on the economy are gloomier than they should be, at least about near-term prospects. Some interest-rate sensitive sectors, including housing, are clearly showing effects of decreasing affordability, due to higher mortgage rates. However, overall, the U.S. economy is strong. In fact, recent consumer spending suggests GDP growth in the fourth quarter of 3% year over year, apparently. Regarding China, I think they have more to lose than we, and will therefore blink enough eventually for President Trump to relent, even if reluctantly. It's worth remembering that in the context of our entire economy, exports to China are tiny: less than \$130 billion in 2017. Imports from China approximate \$500 billion-plus, so the Chinese have huge reasons to compromise. Now, the prospect of 25% tariffs on all Chinese imports wouldn't just hurt China. It would be generally disruptive for the U.S. American companies would have to look for alternative suppliers from other countries, and inflationary pressures would increase slightly. So, maybe it would decrease growth in the U.S. economy more than a simple reading of the trade deficit and our exports would suggest. But it wouldn't take 2.5% economic growth, for example, down to an economic recession. It might take it down to 2%. I've heard of deeper

Continued on back

impact than that, but I think American companies are quite agile and so could adapt to the new reality.

Regarding the stock market, the increase in corporate earnings so far this year along with the down market has decreased valuations quite a bit. The market is basically 20% to 25% cheaper now relative to profits than it was a year ago. Some stocks with good earnings have really been creamed lately. Interest rates are still low.

Though I am worried about the long term in some respects, I feel like now is not a time to run for the exits. I think investors with

some courage to stay the course will be rewarded. Of course, there are no guarantees when it comes to the stock market.

Within the accounts, I am probably not going to make many changes in those that are tax advantaged. However, within taxable accounts, I am likely to take some losses by the end of the year for clients I believe would benefit from my doing so.

To get started in any of our strategies, please call us at 866-575-5700, or send an email to info@salzingersheaffbrock.com. We look forward to hearing from you!

Chief Investment Officer and Portfolio Manager

The S&P 500 Index is a market capitalization-weighted index comprised of the 500 stocks with the largest market capitalizations trading in the United States. This is not a managed portfolio and does not reflect the deduction of fees or expenses; The Lipper Global Multi-Cap Index is comprised of the 30 largest funds by asset size investing in a variety of market cap equities without concentrating 75% of their assets in any one market cap over an extended time. 25% to 75% of their assets are in companies both inside and outside of the U.S. The Lipper General Bond Index consists of the 30 largest funds by assets that do not have any quality or maturity restrictions, and keep a bulk of their assets in corporate and government debt issues. The Lipper Emerging Market Index consists of the 30 largest funds by assets that keep a bulk of their assets in emerging market equities. Lipper indices reflect the deduction of fund fees or expenses; returns include dividends. The Barclays US Aggregate Bond Index is a broad-based benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market in the United States, including Treasuries, government-related and corporate securities, mortgage backed securities, asset-backed securities and CMBS (agency and non-agency). Russell 3000 and Russell 2000 indices are market capitalization weighted equity indices maintained by the Russell Investment Group. The 3000 seeks to be a benchmark of the entire U.S. stock market, and the 2000 seeks to be a benchmark of the small-cap U.S. stock market. More specifically, they encompass the 3,000 largest, or 2000 smallest U.S.-traded stocks respectively, in which the underlying companies are incorporated in the U.S. The FTSE Global All Cap X-US is an equity index which captures most of the world's stocks ex-US. Indexes are unmanaged and unavailable for direct investment. Benchmark returns include reinvestment of income, but do not reflect taxes, or other fees that would reduce performance. Two general types of benchmarks are provided. The first type is a well-known and widely-recognized index, such as the S&P 500 Index and the Barclays US Aggregate Bond Index (both described above). These types of indices are not selected to represent an appropriate benchmark with which to evaluate a composite's performance, but rather to allow for comparison of a composite's performance to that of a widely recognized index. The second type of index is a more narrowly-focused index selected based on one or more characteristics, such as asset class, style or strategy. A more narrowly-focused index may have characteristics similar to those of a composite, actual composite holdings will differ significantly from the index. Consequently, use of a narrowly-focused index does not indicate that a composite will achieve returns, volatility or other results similar to the index. Clients should NOT expect performance comparable to the narrowly-focused index in an actual account. Securities may be mentioned in a portfolio description, and if so a list of a transactions/recommendations for the trailing 12 months is available upon request. There is the chance that market conditions or portfolio performance may deteriorate in the future, and clients may experience real capital losses in their managed accounts. None of the indices may be an appropriate comparison index as our managed accounts may own companies not represented in the benchmarks. Salzinger Sheaff Brock, LLC (SSB) provides this Newsletter for general informational and educational purposes, and where appropriate, to assist in explaining the portfolios and composites.
